

## Inherited Blindness

In the course this week

Never had we heard of these different forms of sight loss

However, now we understand some of the struggles.

Everyday researchers work to solve this problem

Recently there have been developments

In the different forms of therapy

Treatments include stem cell, gene therapy and drug therapy

Even though treatments are available, they are expensive

Due to this, many people are still affected

Blindness is not only inherited

Later in life, people can develop sight problems

It's most common form is AMD – age related macular degeneration

Nobody is safe from this

Diseases like this can affect anyone as it is due to aging

Not enough of the population knows this information

Elsewhere, charities are working hard to encourage necessary awareness

Support is needed for these charities to carry out their work

Stand with us in the fight against sight loss.
