There are 980 cases in the CPSE Caregiver dataset. 155 of these are PFL cases.

	Type	Numeric
	Format	F3
	Measurement	Scale
	Role	Input
N	Valid	155

Central Tendency and Dispersion	Mean	120.05
	Standard Deviation	70.428
	Percentile 25	61.00
	Percentile 50	121.00
	Percentile 75	176.00

Note: Unique identifier for child participants in the PFL study. Children who participated in Northside Partnership's Preparing for Life early intervention

programme may be identified in the CPSE sample using this variable. These unique identifiers match the PFL ID codes in the archived PFL collection and this variable can therefore be used to link cases in both data collections.

The majority of PFL children reached school entry age during 2013 and 2014 therefore there are no PFL participants in CPSE for wave 1 - 4 (2008 and 2011). The number of PFL participants assessed at each wave of CPSE is as follows:

CPSE wave 1 = 0 PFL cases
 CPSE wave 2 = 0 PFL cases
 CPSE wave 3 = 0 PFL cases
 CPSE wave 4 = 0 PFL cases
 CPSE wave 5 = 4 PFL cases
 CPSE wave 6 = 56 PFL cases
 CPSE wave 7 = 63 PFL cases
 CPSE wave 8 = 32 PFL cases

PFL_Group

		Value	Count	Percent
Standard Attributes	Position	3		
	Label	PFL Treatment group: high or low		
	Type	Numeric		
	Format	F3.2		
	Measurement	Nominal

2.00		Low treatment	78	8.0%
Missing Values	996.00	Missing	1	0.1%
	997.00	Not applicable	825	84.2%

Note: This variable indicates the treatment group (High or Low treatment) for children who participated in Northside Partnership's Preparing for Life early intervention programme. Children in the 'low treatment' group were PFL participants and received the standard supports from this intervention. Children in the 'high treatment' group were PFL participants and received the enhanced supports from this intervention. Please refer to the PFL User Guide for more details on these supports. Children in the 'not applicable' group did not participate in PFL and did not receive any of the supports provided by the PFL programme, but attended the same Primary School as the PFL participants. This variable can therefore be used to examine the impact of different PFL treatment groups on school readiness in comparison to children who did not participate in PFL.

However, this is not an accurate measure of actual PFL membership and users should refer to the variables **PFL_code_int** and **PFL_Group** instead for this information.
