The Arnett Caregiver Interaction Scale (CIS) (Arnett, 1989)

The **Arnett Caregiver Interaction Scale (CIS)** consists of 26 items forming 4 subscales, each of which measure different aspect of caregiver-child interaction: positive relationships (indicating warmth and enthusiasm in interaction with children); punitiveness (indicating harsh or over-controlling behaviour in interaction with children); permissiveness (indicating avoidance of discipline and control of children); and detachment (indicating lack of involvement in interaction with children). The CIS has been associated with child outcomes in the EPPE study (Sylva *et al*, 1999).

The following are scores for the 4 CIS subscales at Baseline data collection

1. Positive relationships (sensitivity)
2. Punitiveness (Harshness)
3. Detachment
4. Permissiveness
