

## CSI MacUillaim Survey 2011 – SPSS file

The survey targeted adult residents living in the MacUilliam estate in Tallaght which in 2011 housed approximately 300 families and was one of three areas targeted by the Community Safety Initiative (2009 – 2012). Survey participants were local authority tenants and others who rented from a voluntary housing association. Using a purposive quota sample of 200 randomly selected houses, a door-to-door survey yielded 75 respondents (sample = 200 houses). As in the first two CSI Surveys, respondents were required to be over 18 years of age and researchers collected multiple surveys from houses (where possible) e.g. if more than one adult was willing to participate. The survey was conducted to find out what the experience of those involved and / or affected by the CSI; did they think it is useful, and whether the initiative could or should have been changed or improved in any way.
