VARIABLE NAMING CONVENTIONS

AND LONGITUDINAL DATA

DICTIONARY FOR WAVE 1 AND WAVE 2

OF

THE INFANT COHORT OF

GROWING UP IN IRELAND

Amanda Quail

May 2013

Table of Contents

1. INTRODUCTION

This document outlines the variable naming conventions used in the Infant Cohort of *Growing Up in Ireland* (GUI). Data from the two waves of the Infant Cohort are available using two different naming conventions. Two datafiles are provided for each wave. The two files for each wave contain the same cases and the same information, the only difference between them is the variable naming convention used. For ease and convenience, we will refer below to these two conventions as Convention A and Convention B.

Convention A is a questionnaire-based naming convention, with the variable names relating to the question numbers on the questionnaires. This is the naming convention used when the data were first archived in the Irish Social Science Data Archive (ISSDA) in May 2011. Full details are given in Section 3 below.

Convention B is essentially a longitudinal naming convention with topic-based names harmonised across both waves. Variable naming is based on a harmonised cross-wave approach which is topic-based, with the variable names relating to common topics which were asked across waves. Variables asked in both waves principally have the same variable name for Wave 1 and Wave 2, with the exception of one character which represents the wave to which they relate. This naming convention facilitates cross-wave comparison and longitudinal analysis. Full details are given in Section 4 below. The names of the files distributed through ISSDA are outlined in Table 1.1.

Table 1.1. File names in the Infant Cohort:

	Convention A (Questionnaire–based)	Convention B (Topic-based)
Wave 1 AMF[1]	GUI Data_9MonthCohort	XGUI Data_9MonthCohort
Wave 2 AMF	GUI Data_InfantCohortWave2	XGUI Data_ InfantCohortWave2

---

[1] AMF stands for Anonymised Microdata File. This is the datafile which is available from the Irish Social Science Data Archive (ISSDA) (http://www.ucd.ie/issda/data/growingupinireland/)

2.   TYPES OF VARIABLES

The GUI datafiles (both Convention A and B) contain three types of variables. These can be classified as:

- Identifiers
- Question variables
- Derived variables

Each of these types of variables are outlined below.

2.1. Identifiers

There are three types of identifiers:

- Child's unique identification number (this is a sequence number which runs from 100 to 1,113,400).
- Completion flags which indicate which modules of the interview were and were not relevant and /or completed in respect of each respondent.
- Flag for respondent status at Wave 1 (The Primary Caregiver at Wave 1 may not still be the Primary Caregiver at Wave 2. In the Wave 2 file, there is a flag to indicate if the Primary Caregiver at Wave 2 was the Primary Caregiver or the Secondary Caregiver at Wave 1 or a new respondent. There is also a flag indicating the Wave 1 status of the Wave 2 Secondary Caregiver.

2.2. Question Variables

These contain the information that was recorded from respondents in the course of the interview.

2.3. Derived Variables

A number of derived variables have been added to the dataset. These fall into three main categories, viz., weighting and grossing factors; summary measures for scales; key analysis variables. Each is discussed below.

2.3.1. Survey weighting and grossing factors

Two statistical adjustment factors have been included in the dataset:

- Weighting Factor – this factor weights to the total of number of children in the GUI sample. This may be used for descriptive analysis and tests of statistical significance.

- Grossing Factor – this factor grosses to the total number of children in the Irish population who fall into the relevant age group. This may be used to produce population estimates based on the GUI data.

- Both adjustment factors (weighting and grossing factor) provide the same structural breakdown for estimates.

2.3.2. Summary measures for scales

The appropriate summary measure for each scale used has been included. Scores were calculated according to the appropriate calculations as set out by the test developers.

2.3.3. Key analysis variables

Some key classificatory variables have been included in the datafiles for ease of analysis. These include, for example, household type, equivalised income, household social class and region.

3.   CONVENTION A – QUESTIONNAIRE-BASED VARIABLE NAMING CONVENTION

As noted above, the variable names under this convention follow the structure and formats of the questionnaires in which they were recorded. The variable names in most cases follow a standard format with three separate elements as follows:

- Questionnaire indicator (alpha)
- Section indicator (alpha)
- Question indicator (alpha/numeric)

*Figure 3.1: Example of a questionnaire-based variable name*
Figure 3.1 provides an illustrative example of a Convention A variable name. The first two characters indicate the questionnaire in which the question was included; the third character indicates the section within the questionnaire; and the final three characters indicate the question number. The variable in Figure 3.1 represents question 20b in Section H on the Primary Caregiver Main questionnaire from the Infant Cohort Wave 1 datafile, i.e. 'In general, how would you describe baby's current health'. The various elements are explained in more detail below.

3.1   Questionnaire indicator

The variable name begins with a prefix which indicates in which questionnaire the question was included. Table 3.1 outlines the prefixes used for the various questionnaires in Wave 1 and Wave 2.

Table 3.1: Prefixes for questionnaires in Wave 1 and Wave 2

	Wave 1	Wave 2
Primary Caregiver Main	mm	bpc
Primary Caregiver Sensitive	ms	bpc
Secondary Caregiver Main	f	bsc
Secondary Caregiver Sensitive	fs	bsc

3.2 Section indicator

The Primary Caregiver Main and Secondary Caregiver Main questionnaires are divided into sections by topic. To illustrate this, the Sections and their related topics from the Primary Caregiver Main questionnaire for the Infant Cohort Wave 1 (at 9

months) are outlined in Table 3.2 below and for Wave 2 (at 3 years) in Table 3.3 below.

Table 3.2: Sections and related topics from the Primary Caregiver Main questionnaire for the Infant Cohort Wave 1 (at 9 months)

Section	Topic
A	Introduction and household composition
B	Parenting, child's functioning and relationships
C	Baby's development
D	Baby's habits
E	Childcare arrangements
F	Siblings and twins
G	Prenatal care
H	Infant's health and physical development
J	Parent's health
K	Family context
L	Socio-demographics
M	Neighbourhood/community

Table 3.3: Sections and related topics from the Primary Caregiver Main questionnaire for the Infant Cohort Wave 2 (at 3 years)

Section	Topic
A	Household composition
B	Child's habits and routines
C	Child's physical health and development
D	Parental health
E	Child's play and activities
F	Child's functioning and relationships
G	Childcare arrangements
H	Parenting and family context
J	Socio-demographics
K	About you
L	Neighbourhood/community

3.3 Question indicator

The final element of the variable name relates to the question number on the questionnaire.

Note – not all questions from questionnaire are on the Anonymised Micro Datafile (AMF). Some have been removed to respect the guarantees of anonymity and confidentiality provided to respondents.

IMPORTANT NOTE:

THE RESEARCHER MUST REFER TO THE QUESTIONNAIRES TO CHECK THE EXACT WORDING OF THE QUESTIONS ASKED AT EACH WAVE. IN SOME INSTANCES QUESTION WORDING CHANGED SLIGHTLY FROM WAVE TO WAVE.

4. CONVENTION B – TOPIC-BASED CROSS-WAVE HARMONISED VARIABLE NAMING CONVENTION

As noted above, the variable names under this convention are topic-based and are harmonised across waves. The variable names in most cases follow a standard format with five separate elements as follows:

- Wave indicator (alpha)
- Respondent indicator (alpha)
- Topic category (alpha)
- Topic number (numeric)
- Subtopic identifier (alpha)

*Figure 4.1: Example of a cross-wave harmonised variable name*
Figure 4.1 provides an illustrative example of a Convention B variable name. The first character indicates the wave to which the question relates; the second character

indicates the respondent to whom the question was asked; the third and fourth characters indicate the topic category to which the question relates; the next two characters indicate the question number within the topic category; and the final character indicates the subtopic identifier. For example, the variable in Figure 4.1 represents question 01b in the Child's Health Topic Category (ch), asked of the Primary Caregiver (p) in Wave 1 (a) of the Infant Cohort – i.e. 'In general, how would you describe baby's current health'. The various elements are explained in more detail below.

4.1   Wave indicator:

The first character of the variable name represents the wave in which the data in question were collected. Variable names beginning with 'a' indicate that the data were collected in Wave 1 and 'b' indicates Wave 2.

4.2   Respondent indicator:

The second character of the variable name represents the person from whom information was collected as follows:

> p – PCG Interview (Main & Sensitive)
>
> s – SCG Interview (Main & Sensitive)
>
> c – Child Interview

Strictly speaking, not all variables were based on information from one of the key respondents (i.e. from the Primary or Secondary Caregiver or from the Study Child). Two other types of respondent indicators (z or d) were used.

> z – household identifiers (as discussed in Section 2.1 above)
>
> d – derived variables (as discussed in Section 2.3 above)

Where the same question was asked within wave of more than one respondent, the corresponding variable name will be the same (with the exception of the respondent indicator). For example, current situation with regard to work is asked of both the Primary and the Secondary Caregivers and is named a**p**sd20a for the Primary Caregiver and a**s**sd20a for the Secondary Caregiver.

4.3   Topic category:

All variables fall into one of the twenty-six topic categories listed in Table 4.1.

Table 4.1: Topic categories

	Code	Topic Category:
01	**ID**	Identifier / completion flag
02	**WG**	Weights
03	**HC**	Household Composition
04	**PR**	Pregnancy / Prenatal Care
05	**CB**	Child's Birth
06	**CH**	Child's Health / Healthcare Utilisation
07	**CD**	Child's Cognitive Development
08	**CN**	Child's Nutrition / Diet / Breastfeeding
09	**CR**	Child's Relationships
10	**CL**	Child's Lifestyle (Habits and Routines) / Play and Activities
11	**CP**	Child's Physical Activity Levels / Exercise
12	**CC**	Childcare Arrangements
14	**CE**	Child's Education / Home Learning Environment
15	**PD**	Child's Physical Development
16	**ED**	Child's Socio-Emotional Development / Wellbeing
17	**FC**	Family Context / Parenting
18	**PH**	Parental Health and Lifestyle
19	**MR**	Marital / Partner Relationship
20	**SD**	Socio-Demographics (About You)
21	**NC**	Neighbourhood and Community
22	**PM**	Physical Measures
23	**NR**	Non-resident parent
24	**TC**	Teacher / class characteristics
25	**PC**	Principal / school characteristics
26	**TW**	Twin questions

4.4   Topic number

The topic number simply refers to the number of the variable within the topic category. This runs from 01-99.

4.5   Subtopic indicator

Some variables will have a subtopic indicator. Sets of variables will have the same topic number and different sub-topic indicators (e.g. standardized scales). Also,

routed variables will generally have the same topic number and different subtopic indicators. If it is a stand-alone variable, it will only have a topic number and no sub-topic indicator.

If the same derived variable is derived from more than one respondent, it will have a respondent identifier in their sub-topic (e.g. p, s etc). For example, both the Primary and the Secondary Caregiver are asked a set of 8 items as part of the Centre for Epidemiological Depression Scale. These 8 items are then used to derive a total depression score for each respondent. For Wave 1, these derived total depression score variables are named adPH24**p** for the Primary Caregiver and adPH24**s** for the Secondary Caregiver (see page 111 of the Longitudinal Data Dictionary).

The various elements of the variable names used are summarised in Table 4.2 below.

Table 4.2 Summary of Convention B – cross-wave harmonised naming convention

1	2	3 & 4	5 & 6	7 & 8
Wave	Respondent	Topic category	Topic number	Subtopic indicator
a –Wave 1 **b** –Wave 2	**p** – PCG Interview (Main & Sensitive) **s** – SCG Interview (Main & Sensitive) **c** – Child Interview **z**- household identifiers **d** – Derived Variable	**PR** – Pregnancy / Prenatal Care **CB** – Child's Birth **CC** – Childcare Arrangements **PM** – Physical Measures Etc…	01 - 99	a - zz

Note PCG = Primary Caregiver and SCG = Secondary Caregiver

For e.g.:

apch44 refers to Wave 1, Primary Caregiver interview, Child's Health section, question 44 ('Is the family covered by a medical card?'). If we also wanted to look at this information for Wave 2, the variable name we need is **bpch44**. Note that this is a stand-alone variable, it has no subtopic indicator.

bpcl16a refers to Wave 2, Primary Caregiver interview, Child's Lifestyle (Habits and Routines) / Play and Activities section, question 16a ('Does child wear nappies / training pants / pull-ups during the day?'). The subtopic indicator in this case is 'e'.

asph13a refers to Wave 1, Secondary Caregiver interview, Parental Health and Lifestyle section, question 13a ('And in an average week, how many Pints of beer/cider (do you drink)?'). The subtopic indicator in this case is 'a'.

apsd38ad refers to Wave 1, Primary Caregiver interview, Socio-Demographics section, question 38ad ('(Does anyone in the household receive) Social Welfare - 30 Disablement Benefit?'). The subtopic indicator in this case is 'ad'.

IMPORTANT NOTE:

THE RESEARCHER MUST REFER TO THE QUESTIONNAIRES TO CHECK THE EXACT WORDING OF THE QUESTIONS ASKED AT EACH WAVE. IN SOME INSTANCES QUESTION WORDING CHANGED SLIGHTLY FROM WAVE TO WAVE.

5.   USING THE LONGITUDINAL DATA DICTIONARY

A longitudinal data dictionary is provided in the Appendix of this document. This has been setup so as to be used with both the Researcher Microdata File (RMF) and the Anonymised Microdata File (AMF). The dictionary is laid out in three sections. The first section (the first two columns) contains the topic category (a list of the topic categories and the two character codes which represent them is provided at the start of the data dictionary) and the Convention B cross-wave topic-based variable name. This latter is in the column headed 'XVarname'. This variable name is the cross-wave common element of the variable name. The researcher will need to prefix this variable name with 'a' if interested in the Wave 1 information or 'b' if interested in the corresponding Wave 2 information.

The second section (the next four columns) contains the Convention A questionnaire-based variable name and variable label from the Wave 1 datafile (at 9 months). It also contains a flag to indicate whether that variable is contained in the

RMF and/or the AMF. The third section of the data dictionary shows the same information but this time for the Wave 2 datafile (at 3 years).

The longitudinal data dictionary is sorted by topic category so that all variables which relate to the same topic are listed together. It facilitates cross-wave analysis, by clearly showing which variables were asked at both waves. Consider the example used above of 'In general, how would you describe baby's current health', from page 44 of the longitudinal data dictionary, we can see that this variable falls under the Child's Health section (CH) and the common element of its cross-wave topic-based variable name is pCH01b (so the Wave 1 variable would be **a**pCH01b and the Wave 2 variable would be **b**pCH01b). We also see that this variable was asked at both waves. Its Wave 1 questionnaire-based variable name is MMH20b and Wave 2 questionnaire-based name is bpc2C1. Finally, this variable is available in both the RMF and the AMF for both waves.

The data dictionary also clearly shows which variables were asked at one wave only. For example, from page 32 of the dictionary it is clear that variables in the Pregnancy / Prenatal Care section (PR) were asked only at Wave 1 and not at Wave 2. Notwithstanding the fact that these variables were recorded only in Wave 1 and not in Wave 2 the cross-wave topic-based variable names (in the column headed 'XVarname') still need to be prefixed with 'a' before being used for analysis on the Wave 1 data.

6. USING THE DATA

This section provides some guidance on using the *Growing Up in Ireland* data, specifically in relation to the matching of Wave 1 and Wave 2 datafiles and also using the cross-wave topic-based naming convention in analysis.

6.1 Matching Wave 1 and Wave 2 data

In order to complete longitudinal analysis, the researcher will need to match the Wave 1 and Wave 2 datafiles. Instructions on how to do this are given below, firstly using SPSS syntax and secondly by using the SPSS drop-down menus.

6.1.1. Using SPSS Syntax

The syntax below will open the Wave 1 Convention B file, sort it by the anonymised ID code and match to it the Wave 2 Convention B file by the anonymised ID code. It then saves a file with the Wave 1 and Wave 2 data matched together. The command 'IN wave2' will create a new variable (called 'wave2') which is coded 1 if the case is in Wave 2 and 0 if the case is not in Wave 2. There are 11,134 cases in Wave 1 and 9,793 cases in Wave 2. Longitudinal analysis can be conducted on cases for which we have both Wave 1 and Wave 2 data (9,973 cases) – i.e. selecting those cases for which the created variable 'wave2' equals '1'.

(Note that the researcher will need to change the file handles to the relevant file path indicating where the data have been saved).

```
FILE HANDLE wave1 name = "C:\GUI\XGUI Data_9MonthCohort.sav".
FILE HANDLE wave2 name = " C:\GUI \XGUI Data_InfantCohortWave2.sav".

FILE HANDLE merged name = " C:\GUI \XGUI Data_InfantCohortWave1andWave2.sav".

GET file = wave1.
SORT CASES by zid01.
MATCH FILES file = * / file = wave2 / IN wave2 / by zid01 / map.

SAVE OUTFILE merged.
```

6.1.2. Using SPSS drop down menus

To match the Wave 1 and Wave 2 datafile you must follow these steps:

1. Open the Wave 1 datafile - XGUI Data_9MonthCohort.sav

2. Click Merge → Merge Files → Add variables
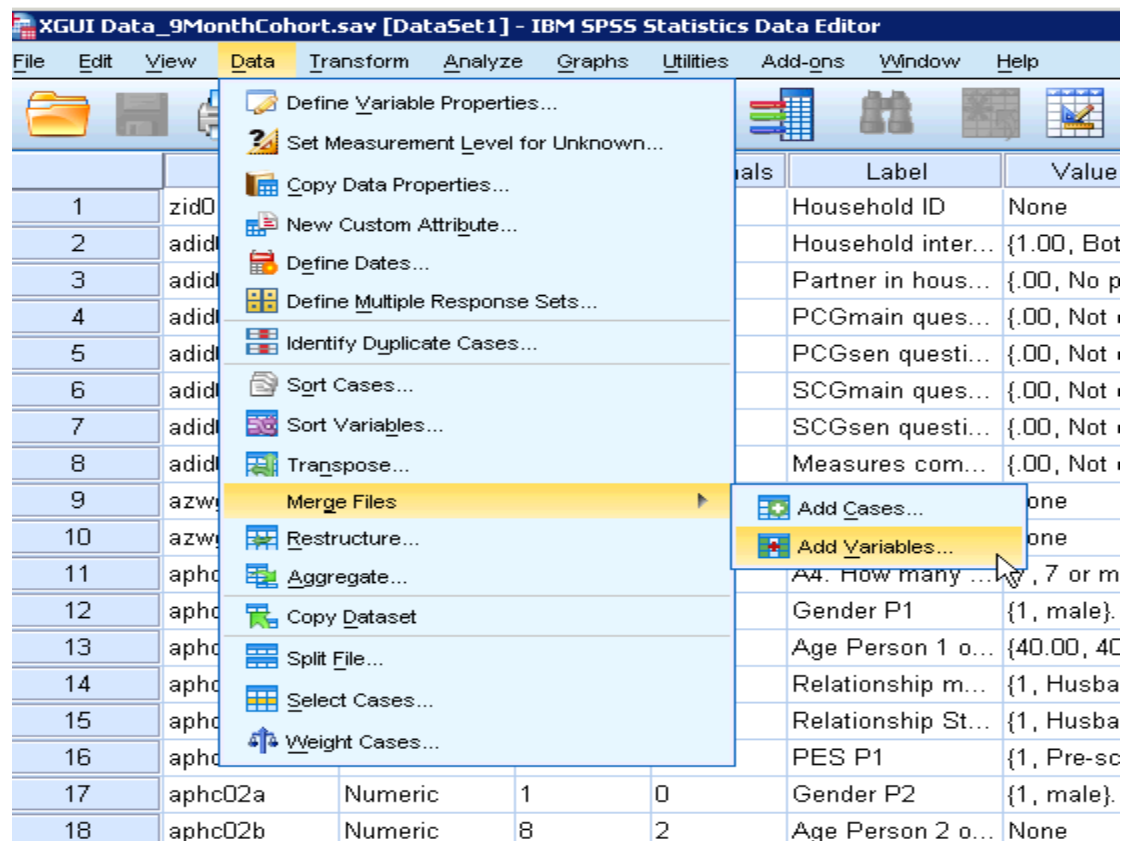

3. This will bring up the following dialog box. Click browse and select the location of the Wave 2 datafile – XGUI Data_ InfantCohortWave2.sav
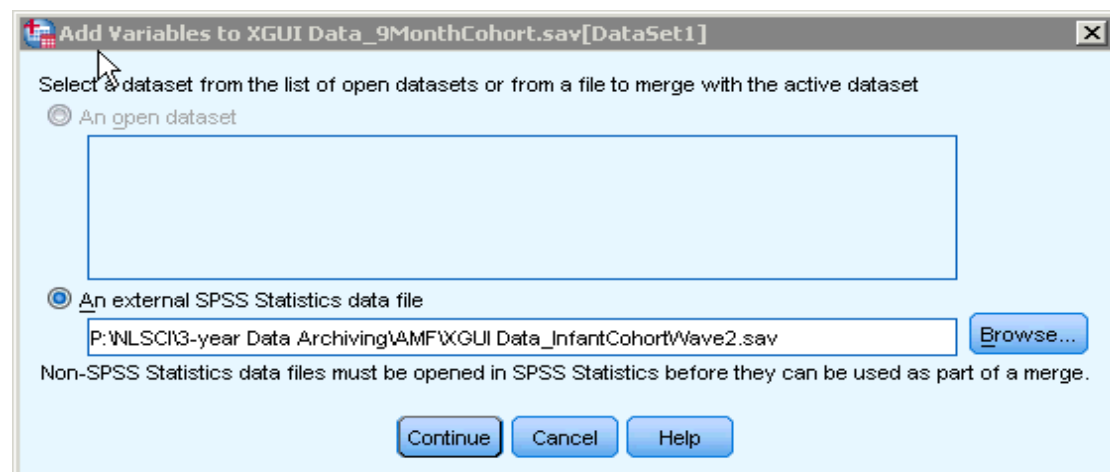

4. In the following dialog box tick 'match cases on key variables in sorted files', and using the arrow move the variable 'zid01' into the Key Variables box. Also tick 'Indicate case source as variable' and type a name for the variable into the box (the default variable name is 'source01'. This has been changed to 'wave2' in the example below). This will create a new variable which is coded 1 if the case is in Wave 2 and 0

if the case is not in Wave 2. Click 'ok'. There are 11,134 cases in Wave 1 and 9,793 cases in Wave 2. Longitudinal analysis can be conducted on cases for which we have both Wave 1 and Wave 2 data (9,973 cases).
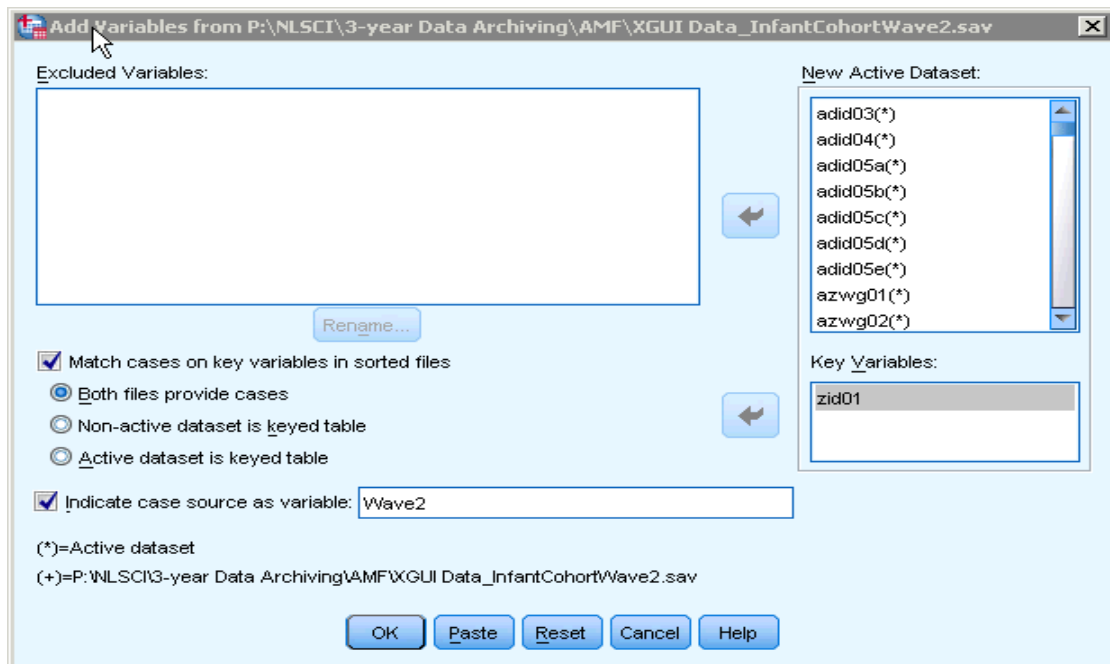

5. The following warning will appear. In order to match the files they both must be pre-sorted by the key variable used for matching – in this case 'zid01'. Click 'ok'.
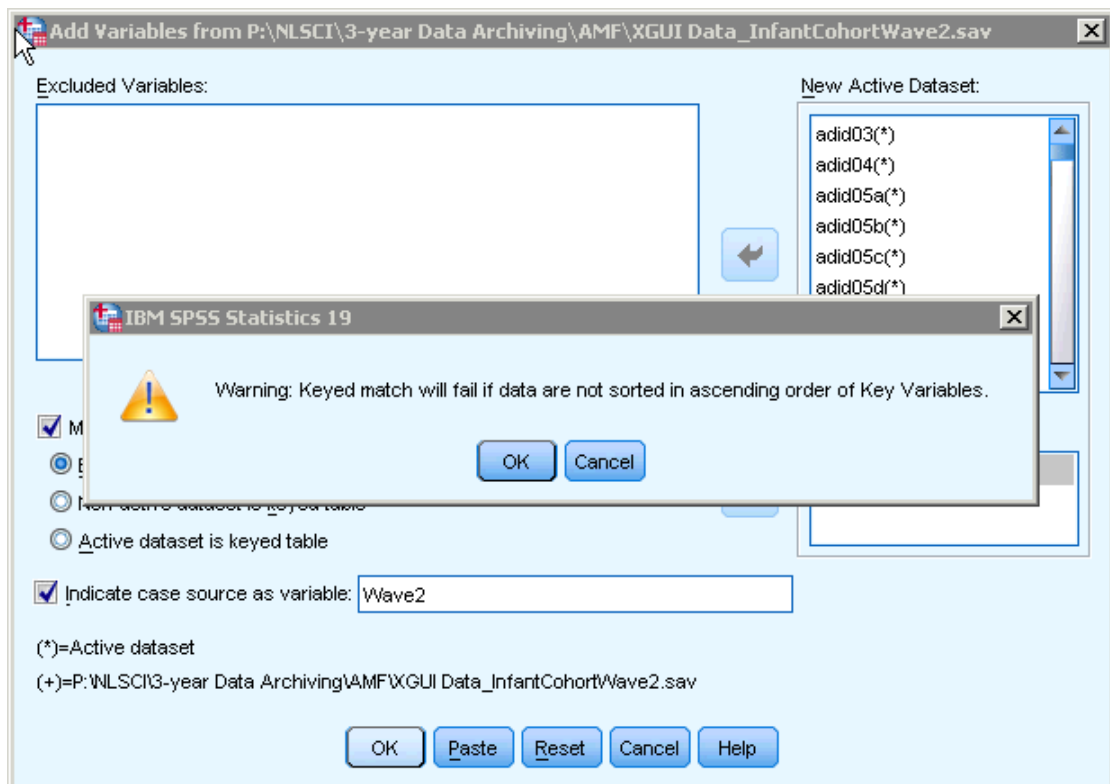

6. The matched file will contain 11,134 cases with all the variables from Wave 1 (prefixed with 'a') and all the variables from Wave 2 (prefixed with 'b'). The Wave 2 variables will be system missing (sysmis) for any cases which are not included in Wave 2 (there are 9,973 valid cases in Wave 2). There will also be an identifier variable 'wave2' which will flag which cases responded in Wave 2.

7. This matched file should be saved under a new name (for e.g. XGUI Data_InfantCohortWave1andWave2.sav). <u>Simply saving the file will overwrite the original Wave 1 file.</u>

6.2   Example of analysis

The syntax below will run some very simple analyses on the combined Wave 1 and Wave 2 file.

First it looks at the primary caregivers report of the child's health status at Wave 1 by family social class. It weights the data by the Wave 1 weight and run a crosstab between the child's health status variable and the social class variable.

It then performs the same analysis for the Wave 2 data. To repeat this analysis for Wave 2, copy the command syntax and simply replace the prefix 'a' with 'b' for all variables.

```
***Wave 1 health by social class.

WEIGHT by azwg01.

CROSSTABS apch01b by adsd56a / CELLS = count col.

***Wave 2 health by social class.
*To repeat this analysis for Wave 2 - simply replace the prefix 'a' with 'b' for all
variables.

WEIGHT by bzwg01.

CROSSTABS bpch01b by bdsd56a / CELLS = count col.
```

Note: The Longitudinal Data Dictionary is an important resource for aiding longitudinal analysis. It allows the researcher to see at a glance which variables have been included across both Waves.

APPENDIX:

LONGITUDINAL

DATA

DICTIONARY

Code	Topic Category:
ID	Identifier / completion flag
WG	Weights
HC	Household Composition
PR	Pregnancy / Prenatal Care
CB	Child's Birth
CH	Child's Health / Healthcare Utilisation
CD	Child's Cognitive Development
